

New species and new records of Heteroceridae from Argentina

(Coleoptera: Heteroceridae)

S. SKALICKÝ

Abstract

A new species of Heteroceridae, *Heterocerus kocouri* sp.n. (Coleoptera: Heteroceridae), is described from Argentina. *Tropicus alcicornis* MASCAGNI, 1989, *T. bartolozzii* MASCAGNI, 1994, *T. sanisidroensis* SKALICKÝ, 2002 and *T. tuberculatus* PACHECO, 1964 are reported from Argentina for the first time. In addition, new Argentinian province records are provided for *Heterocerus ciliaticollis* STEINHEIL, 1869, *Tropicus squamosus* PACHECO, 1964 and *T. tucumanensis* PACHECO, 1964. A checklist of the Heteroceridae known from Argentina is provided.

Key words: Coleoptera, Heteroceridae, *Heterocerus*, *Tropicus*, taxonomy, new species, faunistics, new records, South America, Argentina.

Introduction

The expeditions of M. Snížek (Brno) and S. Jákl (Prague) in five provinces of Argentina (Chaco, Córdoba, Corrientes, Salta and Tucumán) in 2009, 2010 and 2012, yielded a total of 2484 specimens of Heteroceridae. The material included 11 species, one of which, *Heterocerus kocouri* sp.n., is new to science. Four species, namely *Tropicus alcicornis* MASCAGNI, 1989, *T. bartolozzii* MASCAGNI, 1994, *T. sanisidroensis* SKALICKÝ, 2002 and *T. tuberculatus* PACHECO, 1964, are recorded from Argentina for the first time, and four species are new for certain Argentinian provinces.

All specimens mentioned in the present paper are deposited in the author's collection (CSU). Locality data are cited verbatim between "quotation marks". The author's remarks are given in square brackets.

Checklist of the Heteroceridae of Argentina

At present, 22 species of Heteroceridae (13 species of *Heterocerus* FABRICIUS, 1792 and nine species of *Tropicus* PACHECO, 1964) are known to occur in Argentina. The checklist is based on the data provided in this article and on the following references: GROUVELLE (1905), MASCAGNI & MONTE (2010), PACHECO (1964), SKALICKÝ (2002, 2003), TRÉMOUILLES (1992, 1999, 2002). Their occurrence in the individual provinces of Argentina is listed. New records are underlined. The values in the square brackets refer to the number of specimens collected by M. Snížek and S. Jákl.

***Heterocerus kocouri* sp.n.**

TYPE MATERIAL: **Holotype** ♂ (CSU): “ARGENTINA NC; J.V.GONZALEZ; El Tunal 20.1.2010; Salado riv. Snížek.”, “HOLOTYPE HETEROCERUS kocouri Skalický det. Skalický 2019” [red label], “collection S.Skalický (CSU) CZECH REPUBLIC”. **Paratypes** (CSU): 2 ♀ ♀: same data as holotype, but with red “Allotype” resp. “Paratype” label.

DESCRIPTION: Holotype: Total length 5.40 mm (to apex of labrum); elytra 3.20 mm long, 1.90 mm wide across shoulders. Body brown to black, elytra with pale brown pattern as in Fig. 1, pronotum with diffuse reddish anterolateral spots (Fig. 1); mandibles reddish; labrum brown to black, pale brown laterally; antennae and legs pale brown, protibiae with darker lateral margin. Ventral surface dark brown, epipleuron pale brown.

Labrum (Fig. 2): visible part almost as wide as long, rounded, anterior angles emarginate, serrate, finely granulate; setae short, adjacent, with intermixed thin long erect setae. Mandibles (Fig. 2) somewhat curved, strong with acute apex, dorsal subapical tooth acute, well developed. Prostheca without prosthecal notch, with series of sparse teeth. Clypeus (Fig. 2) without pair of anterior horns, anterior margin shallowly convex; coarsely granular, setae short, dense, adjacent.

Head finely granular, punctures approximately 1.2 diameter of eye facets; setae sparse and short except for long erect setae above eyes. Antennae 11-segmented, with 7-segmented club. Scape triangular, pedicel oval with setae as long as club. Pronotum oval, 1.5 times wider than long, as wide as base of elytra; pronotal base completely rimmed. Surface of pronotum finely granular, punctures approximately 0.5 diameter of eye facets, without longer punctures; setae short, sparse, adjacent, longer laterally. Scutellum triangular, pointed. Each elytron with only two shallow furrows next to suture, which do not reach the elytral base; without scutellary depressions, humeral depressions deep, short, extending obliquely almost to shoulders. Surface of elytra finely granular with intermixed coarse and dense granules approximately 1.5 larger than eye facets. Setae of elytra short, semi-erect, yellowish and sparse. Ventral surface relatively densely and finely granular with short, adjacent, yellowish setae. Epipleural ridge absent. Prosternal spine short, rounded. Mesoventrite with pair of short rounded spines in front of each mesocoxa. Metaventrite with a post-mescoxal ridge. Post-metacoxal line incomplete. Stridulatory arch marked, with striae. Protibia with 10 stout spines, meso- and metatibia with nine weak spines.

Spiculum gastrale V-shaped (Fig. 3); arms narrow, firmly connected apically, 1.05 mm long, well sclerotized. Aedeagus (Figs. 4–7) 0.75 mm long, elongate, well sclerotized; parameres long, partially separated from medial plate of phallobase, supporting sheath rimmed basally; penis without internal sac, with two long separate spines.

Allotype ♀: Total length 4.70 mm (incl. labrum); elytra 2.90 mm long, 1.75 mm wide across shoulders. Pronotum slightly narrower than base of elytra. Externally similar to male.

DIFFERENTIAL DIAGNOSIS: According to the shape of the aedeagus and the spiculum gastrale, *H. kocouri* sp.n. is closely related to *H. ciliaticollis*. It differs from the latter in the elytral pattern, total length (3.3–4.1 mm in *H. ciliaticollis*) shape of the pronotum, absence of prosthecal notch (present in *H. ciliaticollis*) and in the morphology of the male genitalia (Figs. 1–7; PACHECO 1964: figs. 291–298).

DISTRIBUTION: This species is so far known only from Argentina (Salta Province).

ETYMOLOGY: The new species is named after the nickname of the collector's cat.

Heterocerus ciliaticollis STEINHEIL, 1869

MATERIAL EXAMINED (Argentina):

Corrientes: 15 exs.: “ARGENTINA NE; S of Corrientes; River Parana; 16.1.2009 Snížek lgt.”.

DISTRIBUTION: Argentina, Bolivia, Brazil, Paraguay (MASCAGNI & MONTE 2010, PACHECO 1964, SKALICKÝ 2002, 2004, 2008a, 2016).
